## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-9 and 16-17, drawn to a composition comprising an antibody, classified in class 530, subclass 387.1, for example.
  - II. Claims 1, 10-12 and 16-17, in so far as they are drawn to a composition comprising an enzyme, classified in class 435, subclass 183, for example.
  - III. Claims 1, 10, 15-17, in so far as they are drawn to a composition comprising a cytokine, classified in class 530, subclass 351, for example.
  - IV. Claims 1, 13, 16-17, in so far as they are drawn to a composition comprising a leptin, classified in class 530, subclass 350, for example.
  - V. Claims 18-22, drawn to a method of treating a patient by administration of an antibody, classified in class 424, subclass 130.1, for example.
  - VI. Claims 23-30, drawn to a method of diagnosing Alzheimer's disease, classified in class 424, subclass 9.3, for example.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I, II, III and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are directed to compositions comprising products that are distinct both

physically and functionally, are not required one for the other, and, therefore, represent patentably distinct inventions.

3. Inventions V and VI are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are directed to different methods that recite structurally and functionally distinct elements, are not required one for the other, achieve different goals, and therefore constitute patentably distinct inventions.

4. Inventions (II, III, IV) and (V, VI) are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are not required one for the other in that the compositions of Groups II-IV are not required for the methods of Groups V and VI.

5. Inventions I and (V, VI) are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the composition of Group I could be used in an entirely different manner such as for the production of antibodies or for the purification of polypeptides rather than in the methods of Groups V and VI.

Art Unit: 1646

6. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, recognized divergent subject matter and non-coextensive literature searches, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
